

Partnerships and Licenses

As a one-stop source for your cybersecurity needs, DTS actively and continuously scans the industry for best-in-class partners and licenses. Our wrap-around services and comprehensive inventory of solutions are tailor-fit for small and mid-sized companies, from enterprise-level programs to specific licenses to managed services.

Our approach to cybersecurity is prescriptive. We help you choose licenses that meet your needs, preferences, and budget. Your DTS solution will be as unique as your operations and your culture. From addressing your vulnerabilities to providing robust protection for your full attack profile, DTS will help you meet specific regulatory standards and certification needs.

Our experts work with you and your internal IT resources. Using a proprietary assessment methodology to determine your requirements, we match you with the right licenses, as well as implementation and system integration.

Partners with purpose

DTS is vendor-agnostic, meaning our recommendations aren't based on, or limited to, what our current partners offer. Rather, we focus on what you need and want. We've done our homework to identify cybersecurity and secure data storage solutions including:

- » VPN
- » Data migration
- » On-prem
- » Off-prem
- » Mobile
- » Cloud
- » Enterprise architecture
- » Integration of multiple operating systems: Android, macOS, iOS, Windows
- » Data backups and restoration
- » Cloud to cloud backups
- » Microsoft environments for commercial, GCC, GCC High, and Azure

The DTS difference: Technical expertise

Cybersecurity compliance isn't a new challenge, but increasingly complex technical standards and evolving policies mean that many organizations need more than a license. Even so-called plug-and-play licenses require technical implementation and proper documentation—and DTS has a staff of CISSP-certified experts to provide that support.

Our experienced team explains the standards and controls, and provides you with options for meeting them—so you can make informed, confident choices about licenses and other solutions. We also offer surrounding services, including managed network and cybersecurity services for ongoing monitoring and maintenance and emergency response; prep for certification and audits; and fractional CIO/CISO to provide the top-level leadership your organization may need without the expense of adding a full-time senior executive.

Cybersecurity solutions. Exceptional results.

Growing a business can be challenging. A strong network of partners elevates our efforts through the sharing of proven ideas, technology, and talents. To meet client needs and growth goals—from business transformation, to process automation, to operational efficiency—DTS and our partner network combine capabilities to bring you strong, compliant, industry-leading cybersecurity solutions.

Licenses for a new security mindset

With our educational approach, we can help you gain visibility into your cybersecurity stance, including processes, assets, and risks. Using a mix of licenses and services, we help you shift from a mindset of defense to one of “mitigate and manage,” where cybersecurity can be leveraged for business advantage.

- » Build business opportunities
- » Grow trust among your stakeholders
- » Make informed choices for your security posture
- » Meet regulatory requirements for your industry, the U.S. Federal government, and other contracts

Work with DTS to determine your cybersecurity licensing needs.

Our assessment process

- Review organizational systems and environments
- Conduct architecture review of technology, vendors, and services
- Consultation throughout the assessment process, providing you a deeper understanding of controls, documentation requirements, and your existing systems
- Detailed report on your status or score, and remediation recommendation, if desired
- Conduct mock CMMC and other third-party assessments
